POST Request Examples

JSON request bodies for first-weight and second-weight save events.

1. POST — First Weight Saved

Sent when the operator saves the first reading, if the client requires pending transactions. The record is not yet finalized.

```
{
  "event_type": "FIRST_WEIGHT",
  "transaction_no": "26-00007",
  "vehicle_no": "WP-1615",
  "supplier_name": "Hayleys DPL",
  "material_name": "Coir",
  "direction": "IN",
  "first_weight_kg": 9000,
  "first_weight_at": "2026-10-27T09:15:00+05:30"
}
```

2. POST — Second Weight Saved

Sent when the operator saves the second reading. Contains the completed weighbridge transaction for ERP processing.

```
{
  "event_type": "SECOND_WEIGHT",
  "transaction_no": "26-00007",
  "vehicle_no": "WP-1615",
  "supplier_name": "Hayleys DPL",
  "material_name": "Coir",
  "direction": "IN",
  "first_weight_kg": 9000,
  "second_weight_kg": 5600,
  "net_weight_kg": 3400,
  "final_net_weight_kg": 3390,
  "first_weight_at": "2026-10-27T09:15:00+05:30",
  "second_weight_at": "2026-10-27T10:20:00+05:30",
  "remarks": "Received at main weighbridge"
}
```

Field Clarifications & Optional Data

transaction_no	Automatically generated by our weighbridge system. Each transaction has one unique number, used in both first- and second-weight POST requests.
direction	IN = goods or materials entering the company. OUT = goods or materials leaving the company, such as a sale or wastage.
sub_type (optional)	If requested, we can provide a subtype under each direction. Examples: IN – Purchase, Own Factory; OUT – Direct Sale, Wastage.
driver_name (optional)	Can be included when required by the client and captured by the operator.

Note: The second-weight example assumes a 10 kg deduction when calculating final net weight.
